

Turn PDFs into editable documents

A compact sample for Word, Markdown, and image export

This document lets you try Local PDF without choosing one of your own files. It contains common document structures and a clean text layer, so you can compare the source with the editable result after conversion. Everything runs in your browser. The file, extracted text, and generated output remain on this device throughout the conversion.

What this sample covers

- 01 Headings, paragraphs, and natural reading order
- 02 Numbered items and line wrapping across a paragraph
- 03 A ruled table with a merged note row
- 04 An embedded image in the correct document position
- 05 Repeating headers, footers, and page numbers

Sample table

Element	Expected result	Ready
Text layer	Selectable paragraphs	Yes
Ruled table	Rows and columns rebuilt	Yes
Merged note: complex layouts may need a quick review after conversion.		

LOCAL-FIRST BY DESIGN

No account, upload endpoint, watermark, or usage limit.

Images, headers, and footers

The chart below is an embedded raster image. Its placement and caption should remain in reading order when the document is converted.

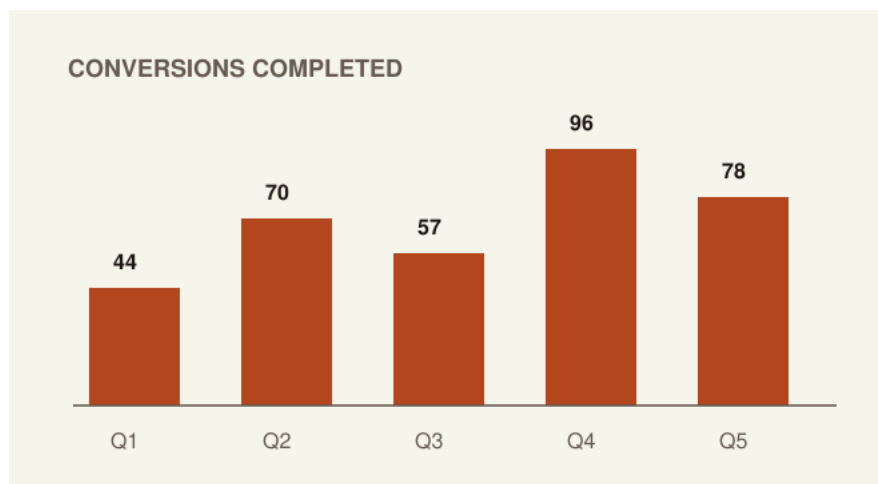

Figure 1. A simple embedded chart

Before you convert

- Choose Word for an editable document with reconstructed structure.
- Choose Markdown for portable text plus extracted image files.
- Choose Images to render selected pages as PNG or JPEG.
- Review low-confidence pages against the original document.

READY TO TRY YOUR OWN FILE?

Drop it anywhere on the page. Local PDF will route it to the matching tool while keeping every byte on this device.
